What we will learn

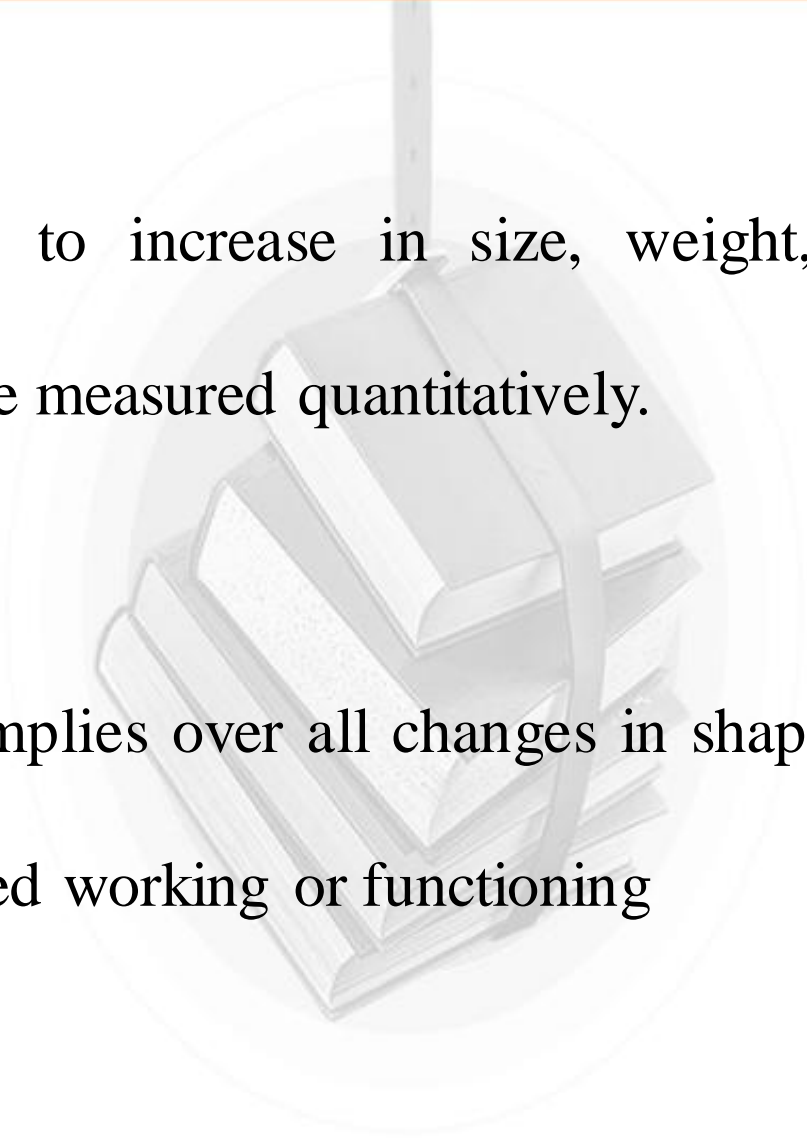

- Meaning of Growth and Development
- Difference between Growth and Development

GROWTH AND DEVELOPMENT

Growth: It refers to increase in size, weight, height and body proportion. It can be measured quantitatively.

Development: It implies over all changes in shape, form or structure resulting in improved working or functioning

DIFFERENCE BETWEEN GROWTH AND DEVELOPMENT

GROWTH	DEVELOPMENT
The term growth is used in physical sense. It generally refer to an increase in size, length, height, and weight.	Development implies overall changes in shape, form or structure resulting in improved working or functioning.
Growth is quantitative in nature as it is measurable	Development is qualitative in nature. It is difficult to measure
Growth doesn't continue throughout life. It stops when maturity has been attained	Development is a continuous process. It goes from womb to tomb.
Growth is one of the part of development	Development is a wider and comprehensive term. It refers to overall changes in the individual.
Growth may or may not bring development. As for example, a child may grow by becoming fat but it may not bring development.	Development is not possible without growth. Minimum growth is required for development.
